

# Thoughts on current and future experimentation needs

*Josep Mangues-Bafalluy, Jorge Baranda, Manuel Requena, Miquel Payaró, Nikolaos Bartzoudis, Mònica Navarro, David Gregoratti*

***Centre Tecnològic de Telecomunicacions de Catalunya (CTTC/CERCA)***

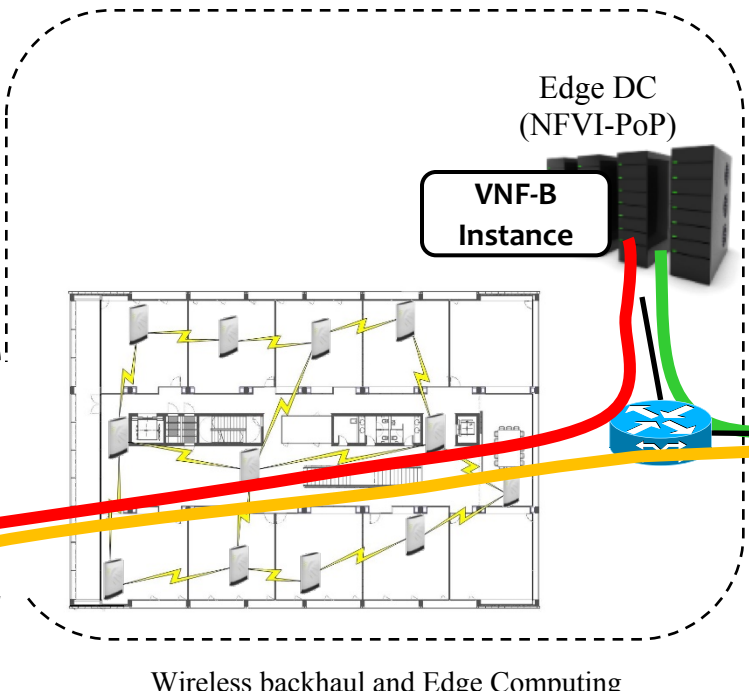

*GEFI 2019 workshop*

- Move towards softwarization and virtualization of functions brings flexibility for experimentation
- Aggregation of the capabilities of multiple testbeds (Federated testbed)
  - E2E orchestration of multi-technology multi-domain network segments
- Open and commonly agreed APIs for experimentation
- Framework that generates meaningful data and is generic enough for any AI/ML-based application
  - Real-time access to experimentation data
- Simulators in emulation mode (e.g., ns-3 LENA)

## GEDOMIS® Testbed

## EXTREME Testbed®

## ADRENALINE Testbed®

Wireless backhaul and Edge Computing

MAN (Packet Aggregation)

WAN (Optical Core)

# Dynamic deployment of vertical services over shared infrastructure

VS user GUI

Vertical CRF

5GT Service Provider

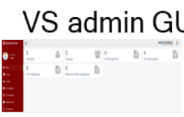

SO GUI

CTTC-MTP GUI

VS admin GUI

openstack Openstack GUI

Edge host

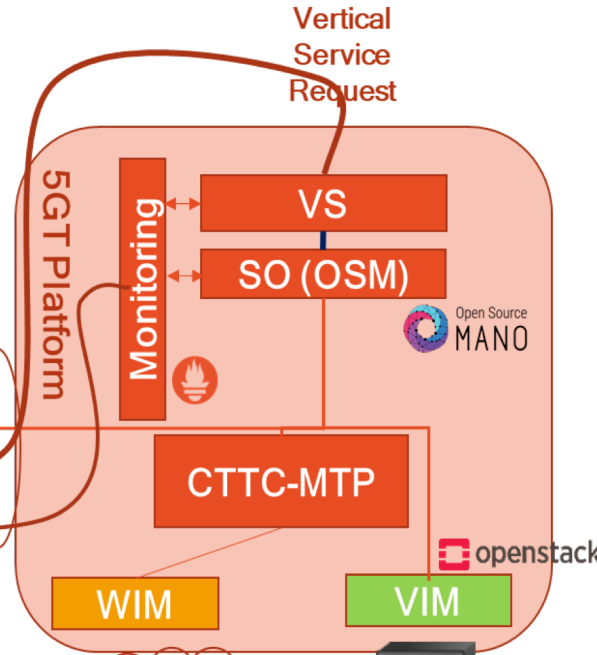

VIM

openstack

- EVS service
- Vehicle messages DB
- Warning message service
- vEPC

VPN control and management

EUENC booth 2019 June 18-21

CTTC 5G lab

Accredited by ARNOR

Certified by R

Awarded with 4 hr

Interfaces are aligned with ETSI NFV Interface and Information Model Specifications (IFA)

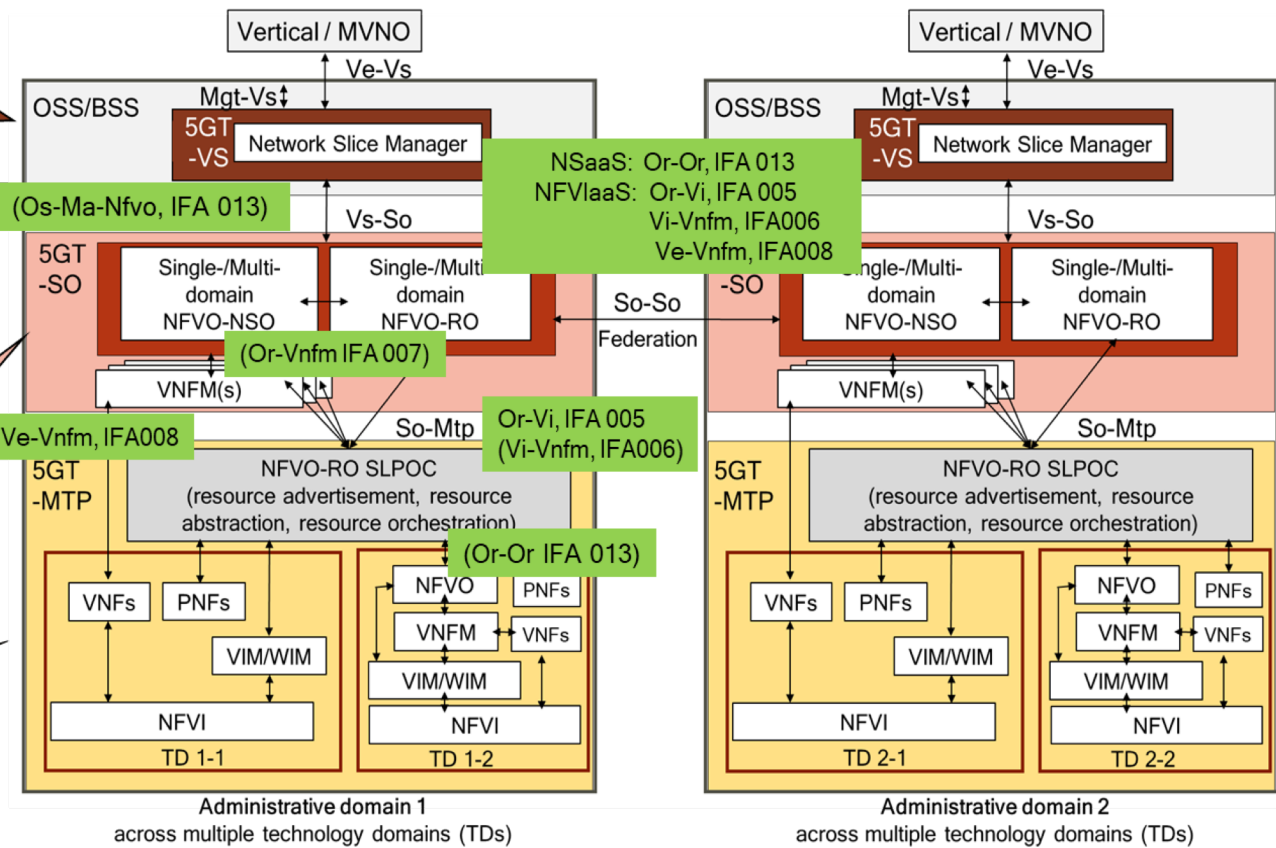

**Defining and Managing Vertical Services:**

- (1) Defining vertical services (VSB->VSD)
- (2) VSD/NSD translator: maps vertical's requirements to network slice requirements
- (3) Arbitrator: mapping vertical services to network slices, in turn to NFV Network Services

**NFV Network Service Orchestration/Federation:**

- Service Orchestration (NFVO-NSO)
- Resource Orchestration (NFVO-RO)

- Allocation of resources over the infrastructure
- Providing abstractions

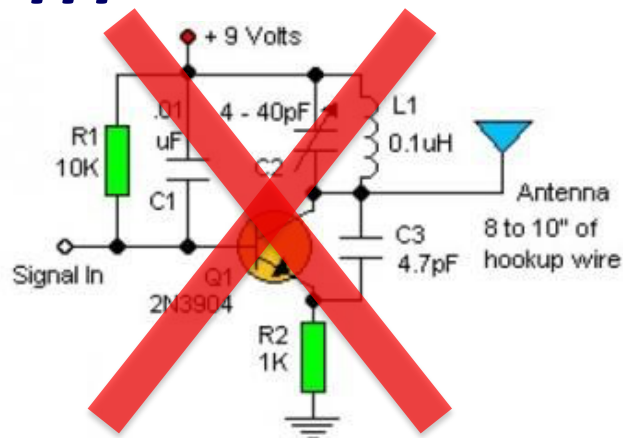

# Dynamic Programmable PHY

LTE stack

Dedicated  
RF circuitry

C / Python / MATLAB ...

HDL

- Equipped with run-time **partial reconfiguration** (PR)
  - Extends and enforces their agility, upgradability and adaptability.
- Especially relevant in 5G and beyond networks
  - functionalities that require flexibility and hardware-acceleration: multi-RAT operation, dynamic function placement, and network function virtualization

SDR Platforms

***Thanks for your kind attention!***
