AI/ML in Computer Networks: Myths, Facts, and Future

Tuesday, 23 May 2023 17:30 (1 hour)

The use of AI/ML in computer networks is not a new concept, with research dating back more than 20 years. However, recent advancements in tools and techniques have sparked renewed interest in the application of AI/ML in networks. Innovative solutions leveraging AI/ML can now be applied to both traditional and new problems. However, this increased attention has also led to inflated expectations and potential misapplication of AI/ML in computer networks. This panel aims to dispel myths and discuss facts and the future of AI/ML in the field. The discussion will focus on identifying challenges and outlining viable steps for progress.

Presenter: Z. GRANVILLE, Lisandro (RNP)
